

ASK THE PROFESSIONAL

Q What is Preventive Dental Care?

A

Wouldn't it be great if you could keep all your teeth and avoid complex dental treatment? Preventive Dental Care allows people to keep their original teeth for their lifetime. Preventive Dental Care includes good home dental care and regular professional care that prevents tooth and gum disease. It should start from infancy and continue throughout life and the time to begin is today. At The Smile Team our dentist and oral health therapists work together to help put you on the right path. We start with a thorough checkup, cleaning, oral health awareness and treatment planning. Our team can provide you with personalized advice and work with you to tailor your home dental care. Both regular professional Preventive Dental Care and correct home care will keep your teeth and gums healthier for a great smile and comfortable eating for life.

The Smile Team looks forward to assisting you with your personalized Preventive Dental Care.
